

In this January issue newsletter you will see we have been very busy planning the new year and research project which we hope to do. Many people have reported a dramatic improvement in their health having got out of high EMFs

Apologies.

We would like to apologise to all the people who had to wait for their EMF detectors. They were in Customs and Excise at Gatwick Airport for several weeks. Despite our efforts to get them out of customs; they are a law unto themselves.

Several of you have asked what to do if you detect harmful levels of EMF. The best thing is to remove yourself from that area. This is particularly important at bedtime. Make sure your head is not being blasted by EMF from a wire in the wall for example. **If you are move your bed.**

I am often ask on the phone are there any particular items that emit high EMF's, unfortunately there are no rules, one radio alarm clock will be fine while another can emit a high EMF. You really do need your own detector to find out **your** EMF risk. Remember to switch on all appliances in the area because they emit much higher EMF when they are turned on.

So if you think EMFs could be affecting you, buy an EMF detector test your environment and move yourself out of those EMF fields.

New Product

Becks Silver/Zapper Model 7a.

As many of you know the Becks silver Zapper is used for killing of or Zapping anything that is in the blood (remember your blood should contain no micro-organisms). To do this it relies on the simple principle of electrocution using small micro currents. So it will be very effective at treating low grade systemic infections that may occur in conditions like M.E. or post viral fatigue syndrome. To do this the Becks device uses battery power, so the longer we can make a battery last the better. We have reduced power consumption by 20%, yet we have still been able to maintain the same high out put. We have even managed to do all this without putting the price up. So as far as we know, we still produce the highest out put Becks Zapper in the world.
Code 5000 cost £100.50

NEXT BECKS TRAINING DAY 19th April 2008, BOOK NOW

The Becks Training Day held on 14th April was a huge success with people from all backgrounds coming along to find out more about the most effective ways to use the Becks Protocol. Comments from the day included:

"brilliant day"

"You made it all so simple".

"I really enjoyed the day"

"Informal and fun, what a great day".

In response to the feedback that we've received, another day has been arranged. Although subject to final venue confirmation, we will hold the next day on **Saturday 19 April** call 01293 446244 to book your place now! Everyone who attended the first event and those who register for the second, will be included on the Becks Register, held on www.comsci.org.uk.

We have also produced a '**Simple Guide to the Becks Protocol**' booklet, which will lead you through the Protocol from the history of its development to how to get the best out of Colloidal Silver and Ozonated water.

The booklet (£6) and the Training day (£65) are available from www.goodvitality.com

Book your place now to avoid disappointment.

Detox hint.

When using the Clarks liver detox protocol, we have found it to be really beneficial to use the Clarks Zapper across the liver. To do this you will need some Biotabs to do this. Place one tab on the abdomen, on the middle of the right half of your chest just above the last rib and another Biotab on your back directly opposite the first one; as if drawing a line through your liver. The best time to do this is just after taking the oil/grapefruit combination.

For details of the Clarks liver detox, you can find it on www.chris-hyslop.com under dietary protocols.

Biotabs code 5007

D101 runs out again.

We must apologise to all our D101 users. In the middle of December one of our foreign customer bought our entire stock, which would normally last until the end of Jan 2008.

We were unable to make any more because our jar suppliers could not supply us any lids until mid January.

It is worth pointing out that the new enriched formula is slightly darker than the old formula; more active ingredients.

So now D101 is back in stock and there should be no more problems.

Dust Mite Controller a big hit!

Customers who have used the dust mite controllers report good results from their dust mite controller. Their breathing has improved and asthma patients have reported dramatic reduction in their inhaler use!

BIG CLUE IF YOU HAVE A PROBLEM. If you go to bed with a clear nose but always wake in the morning with a blocked nose then it is highly likely you have a dust mite problem.

So here is what to do.

1. Throw out any old pillows and buy new ones.
2. Put the Dust Mite controller on your bedside table. We have tested it for EMF emissions and there are none detectable.

This is such a simple and effective approach. We have seen great such results with it preventing recurrence of dust mite infestation, that we highly recommend it.

Product code. 7010 Cost £39.95 plus shipping.

Molluscum contagiosum is a viral infection of the skin. Its more common in children, although anyone can get it. Small, wart-like swellings appear on the skin, often in clusters. Molluscum contagiosum is not serious and usually clears up in 12 18 months without any treatment.

Molluscum contagiosum spreads through skin to skin contact and sharing towels and clothes. This is why its so common among children, who play together, share toys and are constantly with other children at nursery or school. However, most people are resistant to the virus, and there is generally no need to keep children off school.

Several of our customers have found Colloidal silver Gel to be particularly effective at treating this condition. It should be applied 2 -3 times per day. Code 5130 = 30ml

5140 = 60ml jar.

Making Yellow colloidal silver

Many of you have asked how to make your colloidal silver go yellow. Well now you can see it on u tube.

The Colloidal Silver part of the Becks training day was filmed; this has been put on to a DVD which you can buy on www.goodvitality.com in the Colloidal Silver section of the shop (code 5170). The u tube version is a 10 min edited version of that lecture and gives you the basic illustration of what to do.

<http://www.youtube.com/watch?v=4QObUXP5YQ8>

Norovirus.

1. Prevention is better than cure.

It is much better to prevent your self from getting the Norovirus, I recommend you take 15ml of yellow colloidal silver (made with either A Silver/Zapper or CST2 silver maker) under the tongue 3 times per day. Hold it there as long as you can, eventually swallow it if you must.

2. How not to catch from someone who has it.

If a relative has caught the Norovirus and has vomiting and diarrhoea you need to take some simple steps to stop the rest of your household getting infected. It is basically transmitted by hands to mouth (via other objects or food). So imagine that the Norovirus is a red dye powder that gets liberally spread on to door handles taps towels banisters etc.... You will inevitably get some dye on your hands, if you did, you would not want to get it anywhere near your mouth or anything you are about to eat or drink. So clean all surfaces down with colloidal silver, simple tap water grade is fine for this process. Clean down any surface that may have been contaminated. Before using a toothbrush dip it in some colloidal silver. (Use fresh colloidal silver and separate glass for each toothbrush - do not cross contaminate).

3. What to do if you catch it.

If you do catch it, one of the simplest solutions is Ozonated water. Ozonated water will kill the Norovirus as well as give you more energy and hydrate you. Even if you vomit the Ozonated water, keep drinking it you must attempt to re-hydrate and it will have some benefit even in small amounts. I personally would take a minimum of 3 glasses per day of Ozonated water.

Ozonated water is made with our Ozonator (code 5030), you simply put the ozone outlet pipe with air stone in to a glass of cold water and run it for just 2 mins, and drink. It couldn't be simpler. You will recover far quicker.

4. What to do after you have had it.

When symptoms have calmed down you can start to recolonise your gut, I would use Solgar's Multiacidophilus powder (code 1786) this will help to settle your stomach and speed your recovery. A quarter of a teaspoon in a cold drink (not Ozonated water) 3 times a day after something to eat. Do this for a 3 to 4 days then cut down to one-quarter teaspoon per day.

This information was posted on our web site early in January 2008 after many concerned customers asked what to do about the Novovirus; so it is always worth a look at www.comsci.org.uk because it is regularly updated with useful information.

DON'T FORGET ABOUT BIRD FLU.

The press have temporarily lost interest, however as the excerpt below shows the problem has hardly gone away. I do not want to be alarmist, but as I microbiologist I know that another flu pandemic is inevitable. Keep your eyes on www.comsci.org.uk, if anything should happen I will post a profilative protocol on there.

“Spike in H5N1 Confirmed and Suspect Cases in Egypt

Recombinomics Commentary 20:37
January 1, 2008

In the past week the number of confirmed and suspect H5N1 cases has increased dramatically in Egypt (see [satellite map](#)). Following a lull in cases over the summer and fall, the [first confirmed H5N1 fatality](#) was reported a week ago, In contrast to the end of last season, when one of seventeen infections were fatal, [four](#) of the first five cases have died. The number of suspect cases has also increased steadily in the past several days, including one fatal case in [Cairo](#).”
